

XL-22II Loop Pad

Portable mini loop for use when listening to the radio, TV etc.

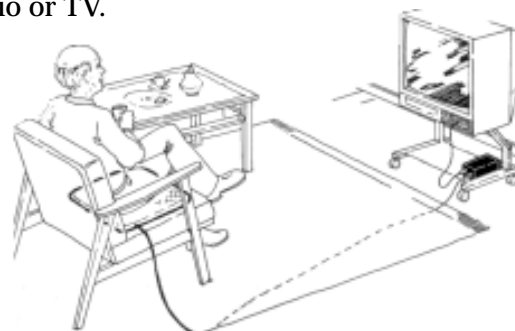

- Portable
- Easy to connect
- 10 m connection cable

XL-22II is an induction loop built-in into a cushion. This mini loop is intended to be used as a portable loop, or when the risk of magnetic field overspill is obvious if installing a room loop.

The XL-22II is preferably placed in your chair, sofa or in any place you are using when you are listening to the radio, TV etc. Due to the small size you may easily apply and bring the XL-22II with you to different places.

N.B. The XL-22II requires the loop amplifier XL-12 or XL-50 to amplify the audio signal from radio or TV.

Technical data:

XL-22II

Resistance:	3,5 ohm
Loop configuration:	10 turns
Length of connecting cable:	10 m
Clothing:	100% polyamide fibre
Upholstery:	100% polyamide fibre
Edging:	100% cotton
Connector:	2-pin DIN
Dimensions:	380x380x5 mm
